

## EF Core (source, C#)

### Relational

```
[Table("Customers")] Customer
[Key] CustomerID : int
CustomerName : string
Orders : [Order]
```

↑  
(1,n)  
FK  
↑

```
[Table("Orders")] Order
[Key] OrderID : int
[ForeignKey] CustomerID : int
Date : DateTime
```

translate  
(reference / embed)

translate  
(node + relationship)

## Spring Data MongoDB (target ODM, Java)

### Document

```
@Document("customers") Customer
@Id id : String
@Field customerName : String
@DocumentReference orders : [Order]
```

@DocumentReference  
(or embed: orders : [Order])

```
@Document("orders") Order
@Id id : String
@Field date : LocalDate
```

## Spring Data Neo4j (target OGM, Java)

### Graph

```
@Node("Customer") Customer
@Id @GeneratedValue id : Long
@Property customerName : String
@Relationship("PLACED", OUTGOING)
orders : [Order]
```

@Relationship("PLACED")

```
@Node("Order") Order
@Id @GeneratedValue id : Long
@Property date : LocalDate
```
